

GENERATE CREDIT CARD PAYMENT VERIFICATION REPORTS

The details outlined below will show you how to generate reports for all of your pre- and post-conversion needs. Credit card payment verification reports should be utilized to ensure that all payments have been applied to completed orders on the CaterTrax system.

PRE-CONVERSION REPORTS

These reports should be **run prior** to the conversion for verification of which orders need payment applied.

- Unpaid Credit Card Orders
 - Identifies any orders where payment has not yet been applied.
- Credit Card Wallet Entries
 - Identifies all credit card entry wallets currently in place.

POST-CONVERSION REPORTS

These reports should be used **post-conversion** to identify orders that need payment information updated for use in the new credit card system.

- Orders Needing Payment System Updates
 - Once the new payment system is live this report identifies any orders where the payment information will require an update to be applied.

Note: The new entry will then also need to be applied to the user's online wallet for faster checkouts in the future.

Generate Credit Card Payment Verification Reports

GET STARTED

To start, visit your CaterTrax website.

1. Click **Admin Sign In** in the bottom right corner of the homepage. (Figure 1)
2. Complete all required fields on the **Administrative Sign In** page and click Sign In.
