CaterTrax Assist, powered by accessiBe

A Simple, AI  
Powered Web  
Accessibility  
Interface for  
your ordering  
experience.

Customer satisfaction is the heart of your  
business. We're here to make you easy to love.

Meet CaterTrax Assist - our new assistive technology, powered by accessiBe. CaterTrax Assist offers functional capabilities that improve the ordering experience for your customers with disabilities. It's a fully automated web accessibility technology that manages ADA compliance in real time. Even as you are updating menus, pushing LTOs, and changing site content, the machine learning technology ensures full accessibility at all times. It's the ease of online ordering made easy for everyone.

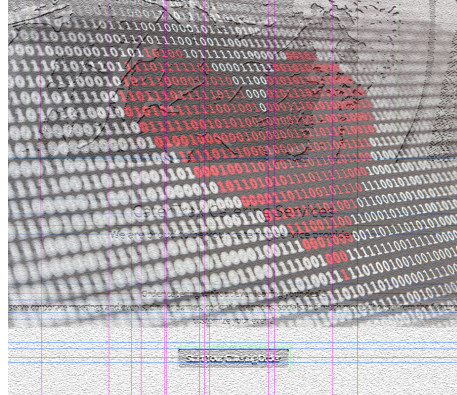

# How it Works

1

## Scans Your CaterTrax Site

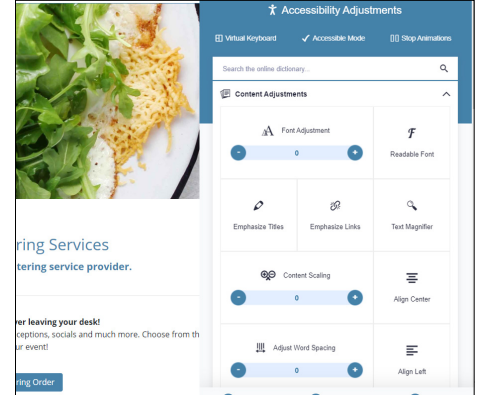

Our AI scans the website's structure and divides it into a "net" of elements, creating layers of useful information for every "block" in the composition.

2

## Analyzes Your Site

Our AI then analyzes each block, testing your site and checking what happens when a specific block is clicked on, or hovering the mouse over another.

3

## Activates Accessibility

Once your site has been analyzed, the system deploys our interface so your disabled customers can adjust the website based on the AI's findings.

# Extensive Options

Over 50 features that people with disabilities can use to tailor any website to their personal needs and you don't have to do a thing.

- Access Hidden Elements
- Adaptation to screen readers
- Forms accessibility
